### Editorial

Meetings International presents a conference for the electronic instrument and sensor industry to take place in Miami, USA, starting in July 18-19, 2022. The Sensors 2022 Conference provides a forum for researchers, engineers and professionals in science and industry, as well as local and global entrepreneurs around the world to present their latest research results, ideas and applications in the fields of sensors and sensor technology to exchange information. On their latest research advances and with the topic "IoT and wireless sensor networks" to cover almost all aspects and areas of sensors and electronic instrumentation. It will offer an opportunity to participants to present their results related to both theoretical and applied research in the field of sensors, biosensors, Radiation sensor, Fiber Optic Sensor, Quantum sensors, Electromagnetic sensors, Humidity Sensor as well as the emerging and related technology and application areas.

The electronic sensors market for the consumer goods industry was estimated at \$ 11.94 billion in 2015 and is expected to grow at a CAGR of 12.26% during the forecast period. The goal is to do a detailed analysis of electronic sensors for the consumer goods industry market based on type, application and geography. The analysis provides detailed information on the main factors influencing the growth of the consumer goods industry market. A sensor is a device that detects changes in its environment and reacts to them. It is used to measure various parameters such as movement, temperature and pressure among others. They are widely used in consumer electronics in numerous devices such as smartphones, game consoles, PCs, home appliances, and kitchen appliances, among others. The demand for smartphones and wearable devices is expected to drive the growth of the electronic sensor market in the consumer goods industry. Image and motion sensors are used most.
